

COURSE OVERVIEW DE0090
Applied Reservoir Engineering & Management

Course Title

Applied Reservoir Engineering & Management

Course Date/Venue

Session 1: May 26-30, 2025/Fujairah Meeting Room, Grand Millennium Al Wahda Hotel, Abu Dhabi, UAE

Session 2: November 16-20, 2025/Boardroom 1, Elite Byblos Hotel Al Barsha, Sheikh Zayed Road, Dubai, UAE

Course Reference

DE0090

Course Duration/Credits

Five days/3.0 CEUs/30 PDHs

Course Description

This practical and highly-interactive course includes real-life case studies where participants will be engaged in a series of interactive small groups and class workshops.

Oil Reservoirs have been created by complex sedimentary and diagenetic processes, and modified by a history of tectonic change. Reservoirs are complex systems on all scales. Decisions such as pumping and injection, new well placement, and drilling in an active oil field, are typical of the complex relationships between reservoir engineering and oil field/reservoir management.

A reservoir's life begins with exploration that leads to discovery, which is followed by delineation of the reservoir, development of the field, production by primary, secondary, and tertiary means, and finally to abandonment. Integrated, sound reservoir management is the key to a successful operation throughout a reservoir's life. Further, the need to enhance recovery from the vast amount of remaining oil and gas-in-place, plus the global competition, requires better reservoir management practices. Reservoir engineering is the application of scientific principles to solve issues arising during the development and production of oil and gas reservoirs. This course covers the engineering operations involved in analysing the production behaviour of oil and gas wells, including well performance engineering, reservoir aspects of well performance, restricted flow into the wellbore, rate decline analysis, and fundamentals of artificial lift.

This course is designed to provide many tools and techniques to help address the challenges of providing a more reliable and sounder reservoir engineering & management. In addition to a wealth of classic information on the concepts and processes involved in reservoir engineering and management, the course presents insights about data acquisition, reservoir performance analysis & forecast, reservoir management economics and improved recovery processes. Further, the course is illustrated through a number of case studies which will be shown to the participants to help them appreciate the concepts presented in the course.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Apply systematic techniques in reservoir engineering and management
- Explain the integration of geoscience and engineering and know the reasons for integrating exploration and development technology
- Ensure the proper execution of the reservoir management process
- Illustrate the proper procedure for data acquisition, analysis and management which includes validation, storing, retrieval and application
- Explain the role of reservoir models as well as the importance of reservoir surveillance
- Apply the different methods of reservoir performance analysis and forecast & give emphasis on the integration of production/injection data, log data, pressure data and any subsurface data for analysis
- Provide details on the reservoir management economics which includes economic criteria, scenarios, economic evaluation, risk and uncertainties
- Acquire an up-to-date knowledge on the improved recovery processes related to waterflooding, thermal methods, chemical methods and EOR screening guidelines
- Implement reservoir management plans for newly discovered fields, secondary and EOR operated fields
- Plan the outlook and the next step & be ready with the current challenges and areas of further work for reservoir engineering and management

Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive “Haward Smart Training Kit” (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.

Who Should Attend

This course provides an overview of all significant aspects and considerations of the applied reservoir engineering and management for those who are involved in analysis, characterization, simulation, integration, statistics and naturally fractured for reservoir. This includes engineers, geologists, geophysicists, managers, government officials, field operation staffs and other technical staff.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations: -

- 
British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

- 
The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units** (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Mr. Mubarak Al-Tahrawi is a **Senior Petroleum & Drilling Engineer** with over **30 years** of extensive experience within the **Onshore and Offshore Oil & Gas** fields. His expertise includes **Well Completion & Work-Over, Well Stimulation Techniques & Treatments, Oil Well Drilling Engineering, Well Control, Drilling Fluids Technology, Drilling Optimization & Well Planning, Exploration Technology, Drilling Technique & Technology, Fishing & Intervention Technique & Technology, Production Logging & Reservoir Monitoring, Casing & Cementing Technology, Tubing Design, Hydraulic Fracturing, Down Hole Services, Pipe Cutters, Pipe Recovery Techniques, Packer Recovery & Milling Tools, Mud Technology and Rig Inspection.**

During Mr. Mubarak's career, he gained his thorough practical experience through several challenging positions such as the **General Manager, Vice President, Well Services Operations Manager, Senior Petroleum Engineering Consultant, Drilling & Work-Over Special Operations Engineer & Consultant, Well Value Assurance Coach, Mud Engineering Head, Drilling Operations Head, Down Hole Services & Rentals Manager, Regional Technical Support Manager, Mud Engineer, Fishing Supervisor, Drilling Supervisor and Company Man** from various international well-renowned companies such as the **SONATRACH, ADMA-OPCO, Weatherford, National Petroleum Company (NPC), ADCO, SHELL, ADWOC, Natural Resources Authority, Sakson Egypt Petroleum Service and UNICARBIDE International.** His integrity and remarkable dedication to his duties and being responsible in managing the day-to-day rig operations, HSE performance, operation and maintenance, ancillary operations, handling field technical and financial activities and many more had proven his significant contributions to the industry.

Mr. Mubarak has a **Bachelor** degree in **Petroleum & Deep Drilling Technology** from the **University of Belgrade.** Further, he is a **Certified Instructor/Trainer.**

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours: -

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

US\$ 8,000 per Delegate + **VAT**. This rate includes H-STK® (Howard Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1

0730 – 0800	Registration & Coffee
0800 – 0815	Welcome & Introduction
0815 – 0830	PRE-TEST
0830 – 0930	Reservoir Management Concepts Definition of Reservoir Management • History of Reservoir Management • Fundamentals of Reservoir Management
0930 – 0945	Break
0945 – 1100	Reservoir Management Concepts (cont'd) Synergy and Team • Integration of Geoscience and Engineering • Integrating Exploration and Development Technology
1100 – 1230	Reservoir Management Process Setting Goals • Developing Plan and Economics • Implementation • Surveillance and Monitoring
1230 – 1245	Break
1245 – 1420	Reservoir Management Process (cont'd) Evaluation • Revision of Plan & Strategies • Reasons for Failure of Reservoir Management Programs • Reservoir Management Case Studies
1420 – 1430	Recap Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today and Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day One

Day 2

0730 – 0900	Data Acquisition, Analysis and Management Data Types • Data Acquisition and Analysis • Data Validation
0900 – 0915	Break
0915 – 1045	Data Acquisition, Analysis and Management (cont'd) Data Storing and Retrieval • Data Application • Example Data
1045 – 1230	Reservoir Model Role of Reservoir Model • Geoscience • Seismic Data • Geostatistics
1230 – 1245	Break
1245 – 1420	Reservoir Model (cont'd) Engineering • Integration • Case Studies
1420 – 1430	Recap
1430	Lunch & End of Day Two

Day 3

0730 – 0900	Reservoir Surveillance
0900 – 0915	Break
0915 – 1045	Reservoir Performance Analysis and Forecast Natural Producing Mechanisms • Reserves • Volumetric Method
1045 – 1230	Reservoir Performance Analysis and Forecast (cont'd) Decline Curve Method • Material Balance Method • Mathematical Simulation
1230 – 1245	Break
1245 – 1420	Integration of Production/Injection Data, Log Data, Pressure Data and any Subsurface Data for Analysis
1420 – 1430	Recap
1430	Lunch & End of Day Three

Day 4

0730 – 0900	Reservoir Management Economics Economic Criteria • Scenarios • Data
0900 – 0915	Break
0915 – 1045	Reservoir Management Economics (cont'd) Economic Evaluation • Risk and Uncertainties • Economic Optimization Example
1045 – 1230	Improved Recovery Processes Waterflooding • Enhanced Oil Recovery Processes • EOR Process Concepts • Thermal Methods
1230 – 1245	Break
1245 – 1420	Improved Recovery Processes (cont'd) Chemical Methods • Miscible Methods • EOR Screening Guidelines
1420 – 1430	Recap
1430	Lunch & End of Day Four

Day 5

0730 – 0900	Reservoir Management Case Studies North Ward Estes Field and Columbus Gray Lease • McAllen Ranch Field • Brassey Oil Field
0900 – 0915	Break
0915 – 1045	Reservoir Management Case Studies (cont'd) Means San Andres Unit • Teak Field • Esso Malaysia Fields
1045 – 1230	Reservoir Management Plans Newly Discovered Field • Secondary and EOR Operated Field
1230 – 1245	Break
1245 – 1345	What's Next The State of the Art • Importance of Integrative Reservoir Management • Current Challenges and Areas of Further Work • Outlook and the Next Step
1345 – 1400	Course Conclusion Using this Course Overview, the Instructor(s) will Brief Participants about the Course Topics that were Covered During the Course
1400 – 1415	POST-TEST
1415 – 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Practical Sessions

This practical and highly-interactive course includes the real-life case studies and exercises: -
