The course is designed for persons who could be required to undertake a rescue of persons working in confined space like an oil tank. The successful attendees will be able to undertake rescue operations as part of an on-site emergency. The course will provide the skills and knowledge to attendees to confidently identify the equipment required, assess hazards associated with the task and safely perform rescue from heights or depths.

The course will provide foundational skills in confined space safety and rope rescue as well as rescue from fall protection.

Delegates will be certified based on the requirements of NFPA 1006 and 1670 to “Operations Level of Confined Space Rescue” (the certification testing should include performance evaluations as well as written exam).

Course Objectives
