

COURSE OVERVIEW IE0680-4D Process Control, Instrumentation & Safeguarding

Course Title

Process Control, Instrumentation & Safeguarding

Course Reference

IE0680-4D

Course Duration/Credits

Four days/2.4 CEUs/24 PDHs

Course Date/Venue

Session(s)	Date	Venue
1	January 22-25, 2024	Boardroom 1, Elite Byblos Hotel Al Barsha, Sheikh Zayed Road, Dubai, UAE
2	April 22-25, 2024	Cheops Meeting Room, Radisson Blu Hotel, Istanbul Sisli, Turkey
3	July 08-11, 2024	Ajman Meeting Room, Grand Millennium Al Wahda Hotel, Abu Dhabi, UAE
4	October 07-10, 2024	Jubail Hall, Signature Al Khobar Hotel, Al Khobar, KSA

Course Description

This practical and highly-interactive course includes various practical sessions and exercises. Theory learnt will be applied using one of our state-of-the-art simulators.

Control systems for industrial applications have advanced dramatically during the last decade. They become more modular and more sophisticated offering a vast variety of control functions for all the systems that operate within a modern "intelligent" facility. Enhanced functionality of the automation systems also means more complexity, interactive strategies, new technologies and systems management with resulting better control and improved safety and reliability.

The ANSI SP 84 (formerly ISA 84.01) "Application of Safety Instrumented Systems for the Process Industries" standard requires that companies assign a target safety integrity level (SIL) for all safety instrumented systems (SIS) applications. The assignment of the target SIL is a decision requiring the extension of the process hazards analysis (PHA). The assignment is based on the amount of risk reduction that is necessary to mitigate the risk associated with the process to an acceptable level. All of the SIS design, operation, and maintenance choices must then be verified against the target SIL.

This course provides participants with the perfect bridge between theories and practical knowledge gained on the plant floor. It provides a thorough exposition of control components, pneumatics, actuators, and regulators and details their application to the industrial process. The course is designed for engineers and technicians in order to update them with the latest technologies in process automation, control and safeguarding. It covers the systematic method for selecting safety integrity levels (SIL's) for safety instrumented systems (SIS).

Some of the material in this course is based on the application of the safety life cycle as it is described in the international standards ANSI SP 84 "Application of Safety Instrumented Systems for the Process Industries" and EN/IEC 61508/61511. This course expands upon the framework developed in these standards. In addition to describing the tasks that users should perform during the safety life cycle, this course also provides detailed procedures for accomplishing these tasks. These procedures are based on risk analysis and reliability engineering principles from a variety of disciplines. Each topic will be discussed in a logically organized manner and contains an abundance of realistic problems, examples, and illustrations to challenge the participants to think and encourage them to apply this knowledge to the solution of practical problems.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Apply and gain an in-depth knowledge and skills in process control, instrumentation and safeguarding
- Practice pressure measurement, level measurement, temperature measurement & flow measurement and recognize their importance in process control
- Identify the various types of Control Valves and learn how to choose the right valve using the selection guidelines and application comparison
- List the various types of actuators and be able to demonstrate valve selection & sizing
- Illustrate field communications including their classifications and safety considerations
- Apply the basic control concepts, including variables, elements, system responses and on-off control and implement modes of control
- Discuss the principles, types, features, configurations and functions of distributed control systems (DCS), programmable logic controllers (PLC) and SCADA systems and recognize their practical applications in process control
- Apply the safety engineering principles and standards and learn the concept of safety life cycle as well as its various models and phases
- Practice hazard analysis as applied in process control safeguarding and employ the safety instrumented functions (SIF), SIS and SIL techniques
- Employ the alarm management concepts, principles, architecture, displays, functions and operator considerations
- Recognize the future trends in measurement, control system & communication technology

Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive “Haward Smart Training Kit” (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials, sample video clips of the instructor’s actual lectures & practical sessions during the course conveniently saved in a **Tablet PC**.

Who Should Attend

This course provides an overview of all significant aspects and considerations of process control, instrumentation and safeguarding for process control engineers and supervisors, instrumentation and control system engineers, automation engineers, application engineers and technologists, process engineers, electrical engineers and supervisors and those involved in the design, implementation, upgrading and safeguarding of industrial control systems.

Training Methodology

This interactive training course includes the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Workshops & Work Presentations
- 30% Case Studies & Practical Exercises
- 20% Software, Simulators & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

Dubai	US\$ 4,500 per Delegate + VAT . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Istanbul	US\$ 5,000 per Delegate + VAT . This rate includes Participants Pack (Folder, Manual, Hand-outs, etc.), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Abu Dhabi	US\$ 4,500 per Delegate + VAT . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Al Khobar	US\$ 4,500 per Delegate + VAT . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations:

- 

The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units (CEUs)** in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **2.4 CEUs** (Continuing Education Units) or **24 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

- 

British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Mr. Sydney Thoresson, PE, BSc, is a **Senior Electrical & Instrumentation Engineer** with over **40 years** of extensive experience within the **Petrochemical, Utilities, Oil, Gas and Power** industries. His specialization highly evolves in **Hazardous Area Classification, Intrinsic Safety, Liquid & Gas Flowmetering, Custody Measurement, Ultrasonic Flowmetering, Loss Control, Gas Measurement, Process Control Instrumentation, Compressor Control & Protection, Control Systems, Programmable Logic Controllers (PLC), SCADA, Distributed Control Systems (DCS)** especially in **Honeywell DCS, H&B DCS, Modicon, Siemens, Telemecanique, Wonderware and Adroit**. Moreover, he has vast experience in the field of **Safety Instrumented Systems (SIS), Safety Integrity Level (SIL), Emergency Shutdown (ESD), Flowmetering & Custody Measurement, Multiphase Flowmetering, Measurement and Control, Mass Measuring System Batching (Philips), Arc Furnace Automation-Ferro Alloys, Walking Beam Furnace, Blast Furnace, Billet Casting Station, Cement Kiln Automation, Factory Automation and Quality Assurance Accreditation (ISO 9000 and Standard BS 5750)**.

During Mr. Thoresson's career life, he has gained his thorough and practical experience through various challenging positions such as a **Project Manager, Contracts Manager, Managing Director, Technical Director, Divisional Manager, Plant Automation Engineer, Senior Consulting Engineer, Senior Systems Engineer, Consulting Engineer, Service Engineer and Section Leader** from several international companies such as **Philips, FEDMIS, AEG, DAVY International, BOSCH Instrumentation and Control, Billiton, Endress/Hauser, Petronet, Iscor, Spornet, Eskom and Afrox**.

Mr. Thoresson is a **Registered Professional Engineering Technologist** and has a **National Higher Diploma (NHD) & a National Diploma in Radio Engineering** from the **Witwatersrand Technikon**. Further, he is a **Certified Instructor/Trainer, a Certified Internal Verifier/Assessor/Trainer** by the **Institute of Leadership & Management (ILM)**, an active member of the **International Society of Automation (ISA)** and the **Society for Automation, Instrumentation, Measurement and Control (SAIMC)**.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1

0730 – 0800	<i>Registration & Coffee</i>
0800 – 0815	<i>Welcome & Introduction</i>
0815 – 0830	PRE-TEST
0830 – 0900	Review of Course <i>Objectives of Course • Timetables</i>
0900 – 0930	Introduction to Process Control <i>Basic Concepts • Performance Terms • Process Control Fundamentals</i>
0930 – 0945	<i>Break</i>
0945 – 1030	Pressure Measurement <i>Bourdon Spring • Spring & Bellows Element • Diaphragm Elements • Pressure Transducers • Installation Considerations</i>
1030 – 1100	Level Measurement <i>Main Types • Buoyancy Tape Systems • Hydrostatic Pressure • Ultrasonic Measurement • Radar Measurement • Electrical Measurement • Installation Considerations</i>
1100 – 1145	Video Presentation <i>Radar Level Measurement</i>
1145 – 1230	Temperature Measurement <i>Thermocouples • RTD's • Installation Considerations</i>
1230 – 1245	<i>Break</i>
1245 – 1330	Flow Measurement <i>Differential Pressure Flowmeters • Oscillatory Flow Measurement • Non-Intrusive Flowmeters • Mass Flow Meters • Positive Displacement Meters • Installation Considerations • Selection Guidelines</i>
1330 – 1420	Video Presentations <i>Coriolis Mass Flow Measurement • Ultrasonic Flowmeter</i>
1420 – 1430	Recap
1430	<i>Lunch & End of Day One</i>

Day 2

0730 – 0815	Control Valve Types <i>Rotary • Linear • Valve Selection • Price Comparison • How to Choose the Right Valve • Selection Guidelines • Application Comparisons</i>
0815 – 0845	Video Clips <i>Control Valve Assembly Break</i>
0845 – 0930	Actuator Selection <i>Types of Actuators • Linear Actuators • Rotary Actuators • Actuator Forces • Positioners • Fail Safe Systems</i>
0930 – 0945	<i>Break</i>
0945 – 1030	Video Clips <i>Actuator Assembly</i>
1030 – 1100	Process Considerations <i>End Connections • Pressure Classes • Face to Face Criteria • Materials Selection • Modes of Failure • Leakage Rates</i>

1100 – 1130	Video Clips Valve Sealing
1130 – 1200	Practical Session Valve Selection & Sizing
1200 – 1230	Video Clips Control Valve Assembly
1230 – 1245	Break
1245 – 1315	Field Communications Introduction • Transmitter Classifications • HART and 4-2-mA • Driving the Circuit
1315 – 1400	Video Presentations HART Communications
1400 – 1420	Safety Considerations Intrinsic Safety • Explosion-Proof Approval Standards • Oxygen Service
1420 – 1430	Recap
1430	Lunch & End of Day Two

Day 3

0730 – 0900	Basic Control Concepts Variables • Basic Elements • Manual Control • Feedback Control • System Responses • ON-OFF Control • Three Term Control
0900 – 0930	Video Presentation Three Term Control
0930 – 0945	Break
0945 – 1015	Modes of Control Stability • Ultimate Gain • Tuning Methods • Ratio Control • Cascade Control • Application Examples
1015 – 1045	Distributed Control Systems Introduction • Traditional Process Controller • System Architecture • DCS Types
1045 – 1130	Programmable Logic Controllers Introduction • History • Today's Position • Principles of Operation • System Components • I/O Interfaces • Configuration
1130 - 1230	SCADA Systems Basic Definitions • Levels of Hierarchy • SCADA Configuration
1230 – 1245	Break
1245 – 1315	Safety Engineering Introduction • Standards • Basic Fundamentals • Safety Life Cycle • Hazard Analysis • Safety Requirements Specification
1315 – 1345	Video Presentation HAZOP
1345 - 1420	Safety Instrumented Functions Definition • Example of a Safety Function • What a SIF is • What a SIF is not • How SIF fits with SIS and SIL • Summary • Bibliography
1420 – 1430	Recap
1430	Lunch & End of Day Three

Day 4

0730 – 0830	Safety Integrity Level Introduction • Definition • Selection Procedure • Practical Examples
0830 – 0930	Safety Instrumented Systems Introduction • Probability of Failure • System Architecture • Safety PLC • Major Systems • Typical Questions & Answers

0930 – 0945	Break
0945 – 1030	Alarm Management Introduction • Architecture • Update Times • Speed of Response • Operator Considerations • Alarm Displays • Alarm Priorities • Alarm Functions • Seven Steps to Alarm Management
1030 – 1130	Video Presentation Explosion at BP Texas City Refinery
1130 - 1230	Future Trends Measurement Technology • Control System Technology • Communication Technology
1230 – 1245	Break
1245 - 1315	Video Presentation 3 Beam Ultrasonic Flowmeter
1315 - 1345	Case Studies Piper Alpha Disaster • Bhopal Gas Tragedy • Chernobyl Disaster
1345 – 1400	Addendums Review, Wrap-up Session & Course Conclusion
1400 – 1415	POST-TEST
1415 – 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Simulator (Hands-on Practical Sessions)

Practical sessions will be organized during the course for delegates to practice the theory learnt. Delegates will be provided with an opportunity to carryout various exercises using one of our state-of-the-art simulators “Allen Bradley SLC 500”, “AB Micrologix 1000 (Digital or Analog)”, “AB SLC5/03”, “AB WS5610 PLC”, “Siemens S7-1200”, Siemens S7-400” “Siemens SIMATIC S7-300”, “Siemens S7-200” “GE Fanuc Series 90-30 PLC”, “Siemens SIMATIC Step 7 Professional Software”, “HMI SCADA” , “RSLogix 5000” , “Logix5555” , “Schneider Electric Magelis HMISTU” , “Automation Simulator” , “Gas Ultrasonic Meter Sizing Tool”, “Liquid Turbine Meter and Control Valve Sizing Tool”, “Liquid Ultrasonic Meter Sizing Tool” and “Orifice Flow Calculator”.

Allen Bradley SLC 500 Simulator

Allen Bradley Micrologix 1000 Simulator (Digital)

Allen Bradley Micrologix 1000 Simulator (Analog)

Allen Bradley SLC 5/03

Allen Bradley WS5610 PLC Simulator PLC5

Siemens S7-1200 Simulator

Siemens S7-400 Simulator

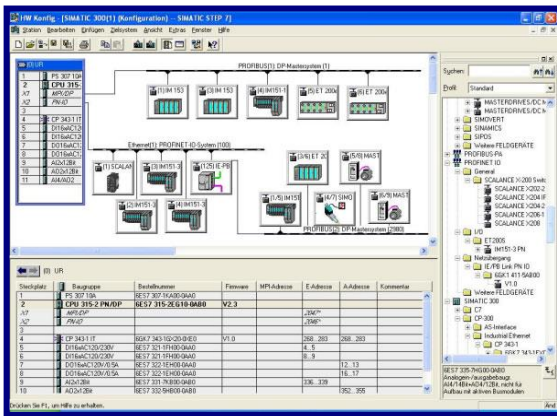

Siemens SIMATIC S7-300

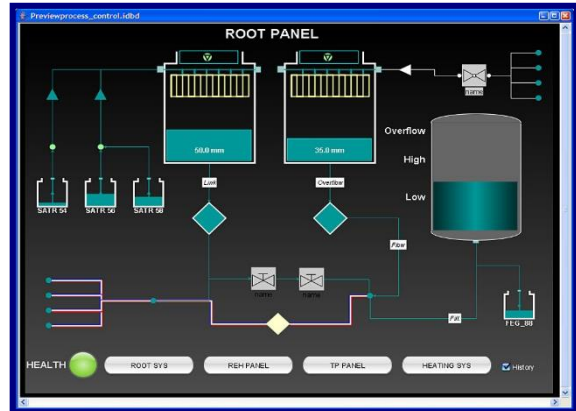

Siemens S7-200 Simulator

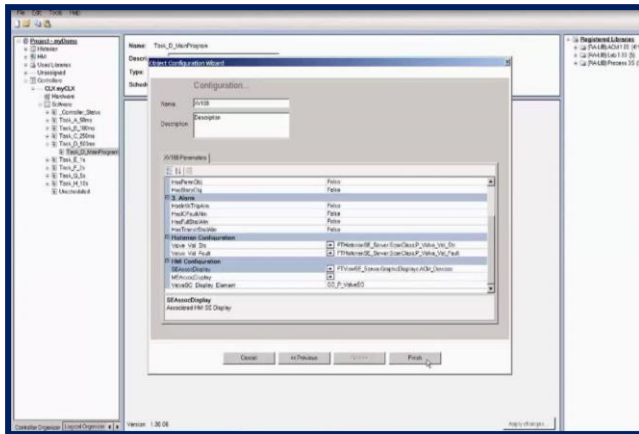

GE Fanuc Series 90-30 PLC Simulator

Siemens SIMATIC Step 7 Professional Software

HMI SCADA

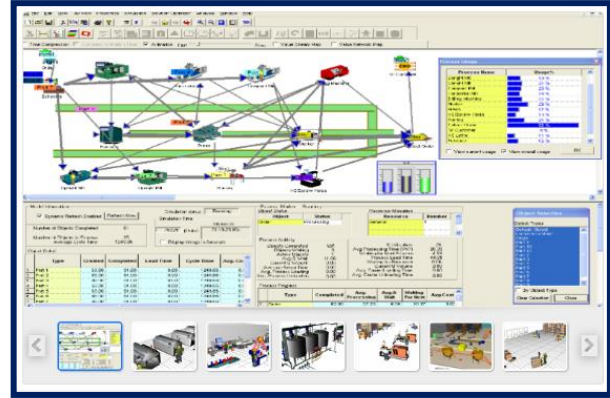

RSLogix 5000

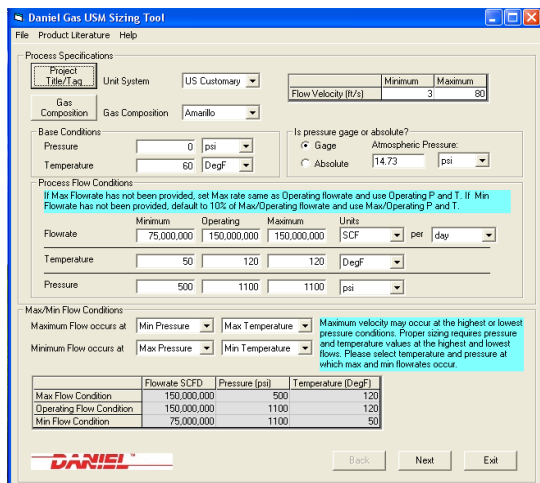

Logix5555

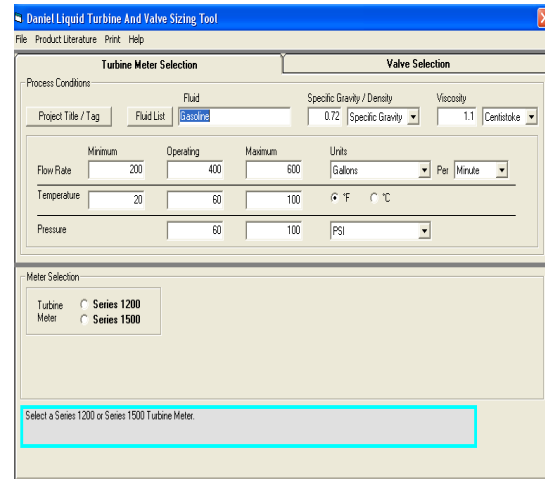

Schneider Electric Magelis HMISTU

Automation Simulator

Gas Ultrasonic Meter (USM) Sizing Tool Simulator

Liquid Turbine Meter and Control Valve Sizing Tool Simulator

**Liquid Ultrasonic Meter Sizing
Tool Simulator**

Orifice Flow Calculator Simulator
